

Upgrading from SSDCP 2005 to 2011

Thank you for purchasing the SSDCP 2011 upgrade! Before installing this new version, your SSDCP license must be removed from the current version so that it can be installed with this new 2011 version.

1. Insert the USB flash drive then your old 2005 CD. Answer **NO** to the two small questions boxes prior to the SSDCP install menu.
2. On the SSDCP install menu, choose REMOVE LICENSE. It will say "License has been successfully removed" when complete.
3. Choose EXIT. Remove the 2005 CD.
4. Insert the 2011 Update CD.
5. On the install menu choose INSTALL LICENSE. It will say "License has been successfully installed" when complete.
6. Choose INSTALL SSDCP.
7. Choose EXIT. Remove the flash drive and the 2011 CD.

That completes the steps for installing SSDCP 2011. The next steps are done inside AutoCAD. See the SSDCP manual if you are unfamiliar with these tasks.

1. Remove the SSDCP 2005 folder from the AutoCAD search path.
2. ADD the SSDCP 2011 folder to the AutoCAD search path and MOVE it UP until it is directly above AutoCAD Support.
3. Unload the old 2005 menu.
4. Load the new 2011 menu via TOOLS>RUN SCRIPT

Should you ever need to revert back to SSDCP 2005, simply reverse this process.
